

# BUSINESS PORTFOLIOS

---

**365 DAY COVERAGE**

**TOGETHER WE WIN ...**

We are trading large amounts of Bitcoin, Etherium, Bitcoin Cash and Litecoin for Investors using our **"HIGH MARGIN ELITE TRADED PORTFOLIOS"**

These has become more popular amongst our investors because for an improved investment sum, there is an improved safety margin and a guarantee for long term and sustainable profit.

An ETF is an investment vehicle that tracks the performance of a particular asset or group of assets. ETFs allow investors to diversify their investments without actually owning the assets tracked by an ETF. For those individuals looking to focus only on gains and losses, ETFs provide a simpler alternative to buying and selling individual assets. Further, because many traditional ETFs target larger baskets of names with something in common (a focus on sustainability, for instance, or stocks representing the video game industry and related businesses) they allow investors to easily diversify their holdings.

The Benefit of the bitcoin ETF is that investors don't have to bother with the security procedures associated with holding bitcoin and other cryptocurrencies. Further, there is no need to deal with cryptocurrency exchanges in the process; investors can just buy and sell the ETF through traditional exchanges and markets.

By doing so, we trade funds securely in pools and distribute profits across participating accounts at a stated time frame as per agreed in our discussions and reflected in the investor contract. The below portfolios have become more popular amongst our investors because for an improved investment sum, there is an improved safety margin and a guarantee for long term and sustainable profit.

## BUSINESS (5-25 BTC)

### BENEFITS:

15-18% monthly return on every investment.

Monthly Plan.
